Purpose
of the platform

Creation of corporate systems for automation
and integration of enterprise business processes
**without programming (low-code)**

What are Low-code solutions?

– an approach to creating and modifying applications that requires little or no writing of program code

– a set of functional blocks within an information system that can be built into business processes in an arbitrary order

The Lego set
«Star Wars - Millennium Falcon»
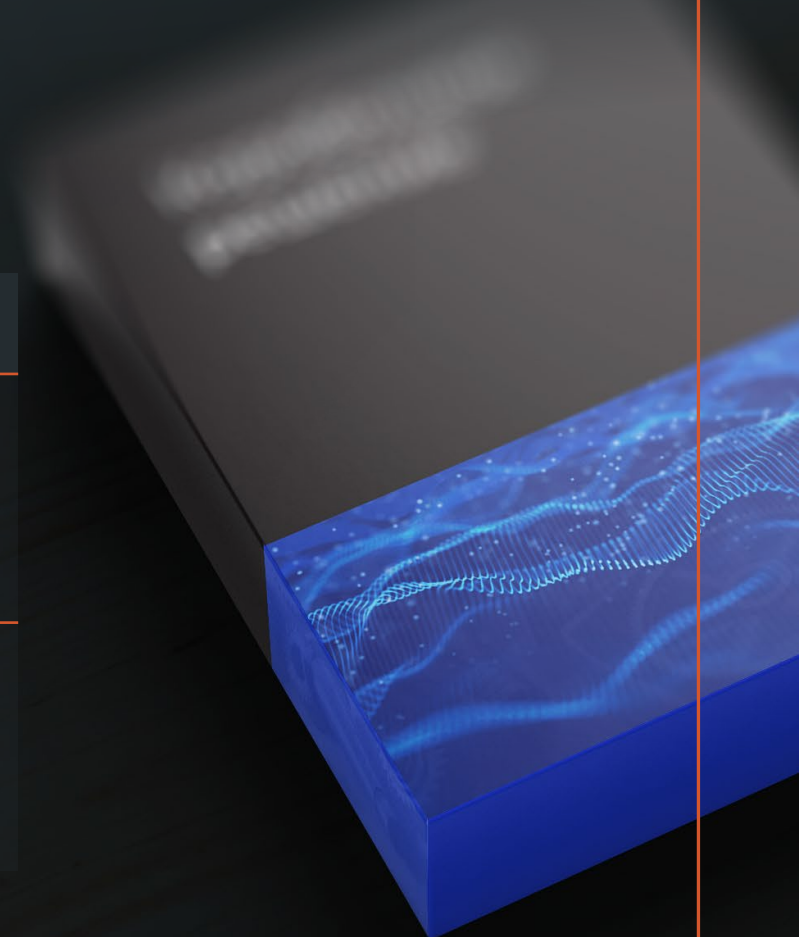

Benefits of the platform

Compared to the development of an information system through programming

Cost

Classic development

- Long timeframes
- High cost
- Difficult modernization

KS Business

- Short timeframe
- Low cost
- Fast modernization

Time

Benefits of the platform

Compared to developing an information system
by implementing a box solution

	KS Business	Boxed solution
Degree of adaptability to enterprise needs	high	medium
Developer independence	high	low

Business process builder

Interface builder

Report builder

Database management

Integration customization

Directories

KS Business
Technology platform

...

Directories

- Creation of necessary directories

- Versioning support

- Possibility to build a unified enterprise directory system

Integration customization

Setting up electronic data exchange with other enterprise information systems

Interface builder

- Creating a user interface

- Distinguishing user access rights

Data control center

- Input and output data control

- Inter-document control

- Control when documents pass through the stages of business processes

- Control of electronic exchange with other information systems

Business process builder

- Creation of document movement routes by stages of business processes with transition rules

- Setting due dates and responsible persons

- Notification of responsible executors about document movement statuses

- Monitoring of specialists' workload and executive discipline

- Document movement history logging

Report builder

- Creating reports using data visualization tools: tables, matrices, graphs, charts and maps

- Possibility of detailing information in the report down to primary documents

Built-in messenger

- Secure means of communication
  (history is stored on the customer's server)

- Using links to specific documents
  and reports in messages

- Creation of separate topic groups

Management effect

Corporate information system implemented on KS Business allows:

- to organize the work of structural subdivisions in a unified digital environment

- to unite disparate software products of the enterprise into a single space

- to create a single data repository for analytical processing and decision making

- to quickly adapt to changes in external and internal factors

Supply options
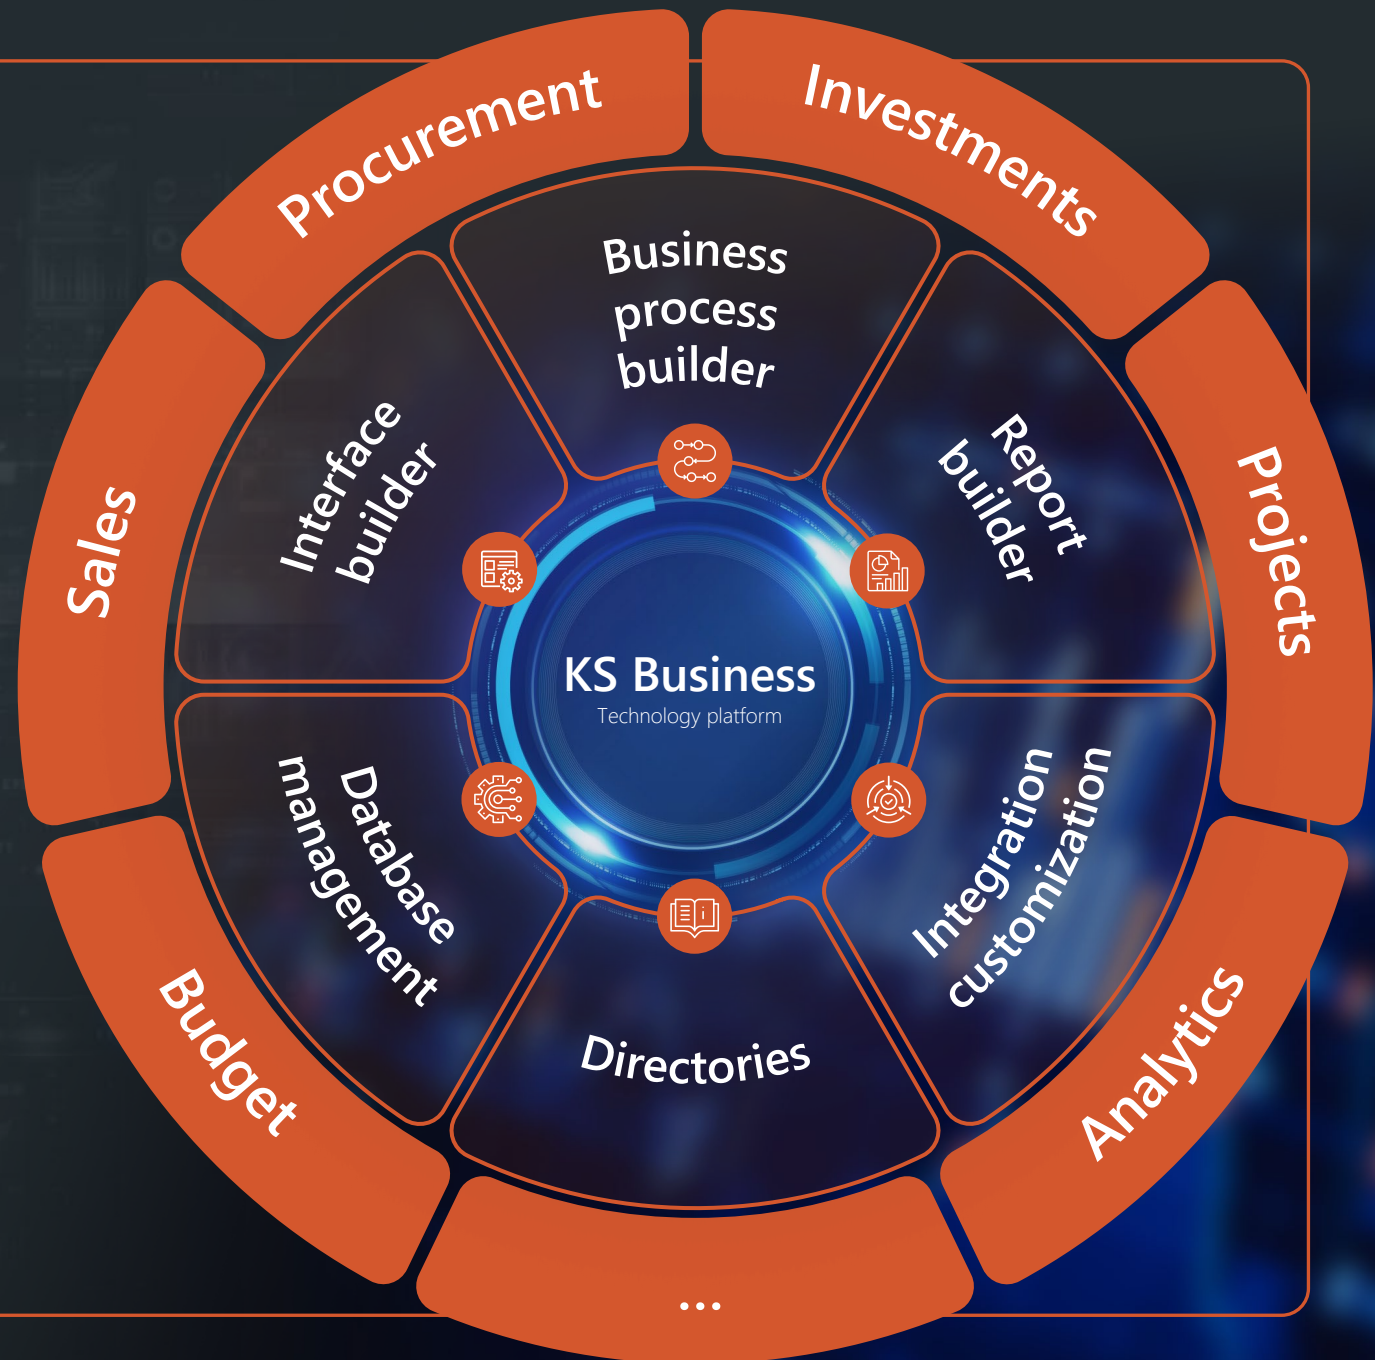

Base module

Low-code development tools

Quick creation of your own application modules or adjusting preconfigured ones
